MAGLIVE

INOVATION IN MOTION

LEADER OF TOP INNOVATIVE ELEVATOR BRAND

Countless magical spaces
Popular, graceful, concise with high grade
A free and brand-new experience for you New life promotion

About MAGLIVE

THE GLORY OF AN URBAN LEGEND

MAGLIVE Elevator Co.,LTD., is a focus on the global elevator development and manufacturing of elevators and escalators covers an area of 120,000 sq.m, the first phase construction area of 80000 square meters, with a total investment of 90 million dollars. Company set product development design, manufacturing, sales, installation, maintainance in a body with height of 108 meters, the elevator speed 8 m/s installed inside the test tower. With annual output of 30000 sets of manufacturing capabilities,MAGLIVE is facing the global market of elevators and escalators of large enterprises company . The system is superior, serves all over the world, MAGLIVE elevator products with international standards and accurate market positioning, fine operation, landmarks in China to provide first class passenger flow solutions, we will work to build a world-class manufacturing base in China, for the market to provide product; and services for the meet and exceed customer, creating perfect.

The company has fully introduced the world's leading production equipment & technical team inherited the product quality and cultural connotation . with elevator market competitiveness.

We are of abundant manufacturing strength & flexible innovation ideas. Good reputation of MAGLIVE comes upon high quality guarantee. It is established upon the basis of excellent service.

MAGLIVE will create infinite values for extensive clients by remarkable reputation prompt & considerate services.

- Advanced Elevator Technology R & D Center
- The leader in the field of ultra-high-speed elevator
- Industry 4.0 modern base
- World leading elevator supplier

ENTERPRISE DEVELOPMENT HISTORY

1989

It established manufacture enterprise for elevators and various models of elevator & escalator parts assembly in China.

2004

and obtains Class-A Elevator Manufacture & Installation Qualifications in China.

2012

Multiple MAGLIVE elevator series have been awarded "International Standard Product Logo Certificate". A wholly-owned Taiwan, Hong Kong and Macau legal person was added to promote the future development of the industry.

2015

Nearly 100m super high speed elevator test tower has been built. It lays a solid foundation for the R&D of super high speed elevators. Third-phase factory houses have been completed. It can annually manufacture 10,000 elevators. It rapidly quickens its competitive power in global market.

2019

MAGLIVE not only introduces top production technology, but also establishes a strategic cooperation alliance with Hong Kong to join hands in integrating regional advantages, adhere to innovation for development, and rely on technology to shape the brand and open an infinitely bright future. Passed ISO9001 quality management system certification, ISO14001 environmental management system certification, OHSAS18001 occupational health and safety management system certification.

2022

MAGLIVE has added a home intelligent series, creating a comfortable and intelligent living space and realize your pursuit of home.

2024

Optimize the "manufacturing+service" chain and launch a full lifecycle management platform.

2002

Representatives of foreign Investor visited Jiangsu, China. It reinforces communication and development in elevator industry and technology.

2008

MAGLIVE comprehensively upgraded its production supervision.

2014

It has been appraised "High & New Tec Enterprise", "Sci-Tech Style Enterprise" "High & New Tech Products" etc.

2016

More energy has been invested in developing green and energy-saving elevators, which is the 'dream of the world'. Practice the concept of energy conservation and environmental protection, and obtain the National Elevator Quality Certificate and National Elevator Energy Efficiency Certificate.

2020

Passed the assessment of the integration of informatization and industrialization management system, and completed the reassessment of high-tech enterprises.

2023

MAGLIVE will launch intelligent elevator products that integrate IoT technology to achieve intelligent and technological implementation.

2025

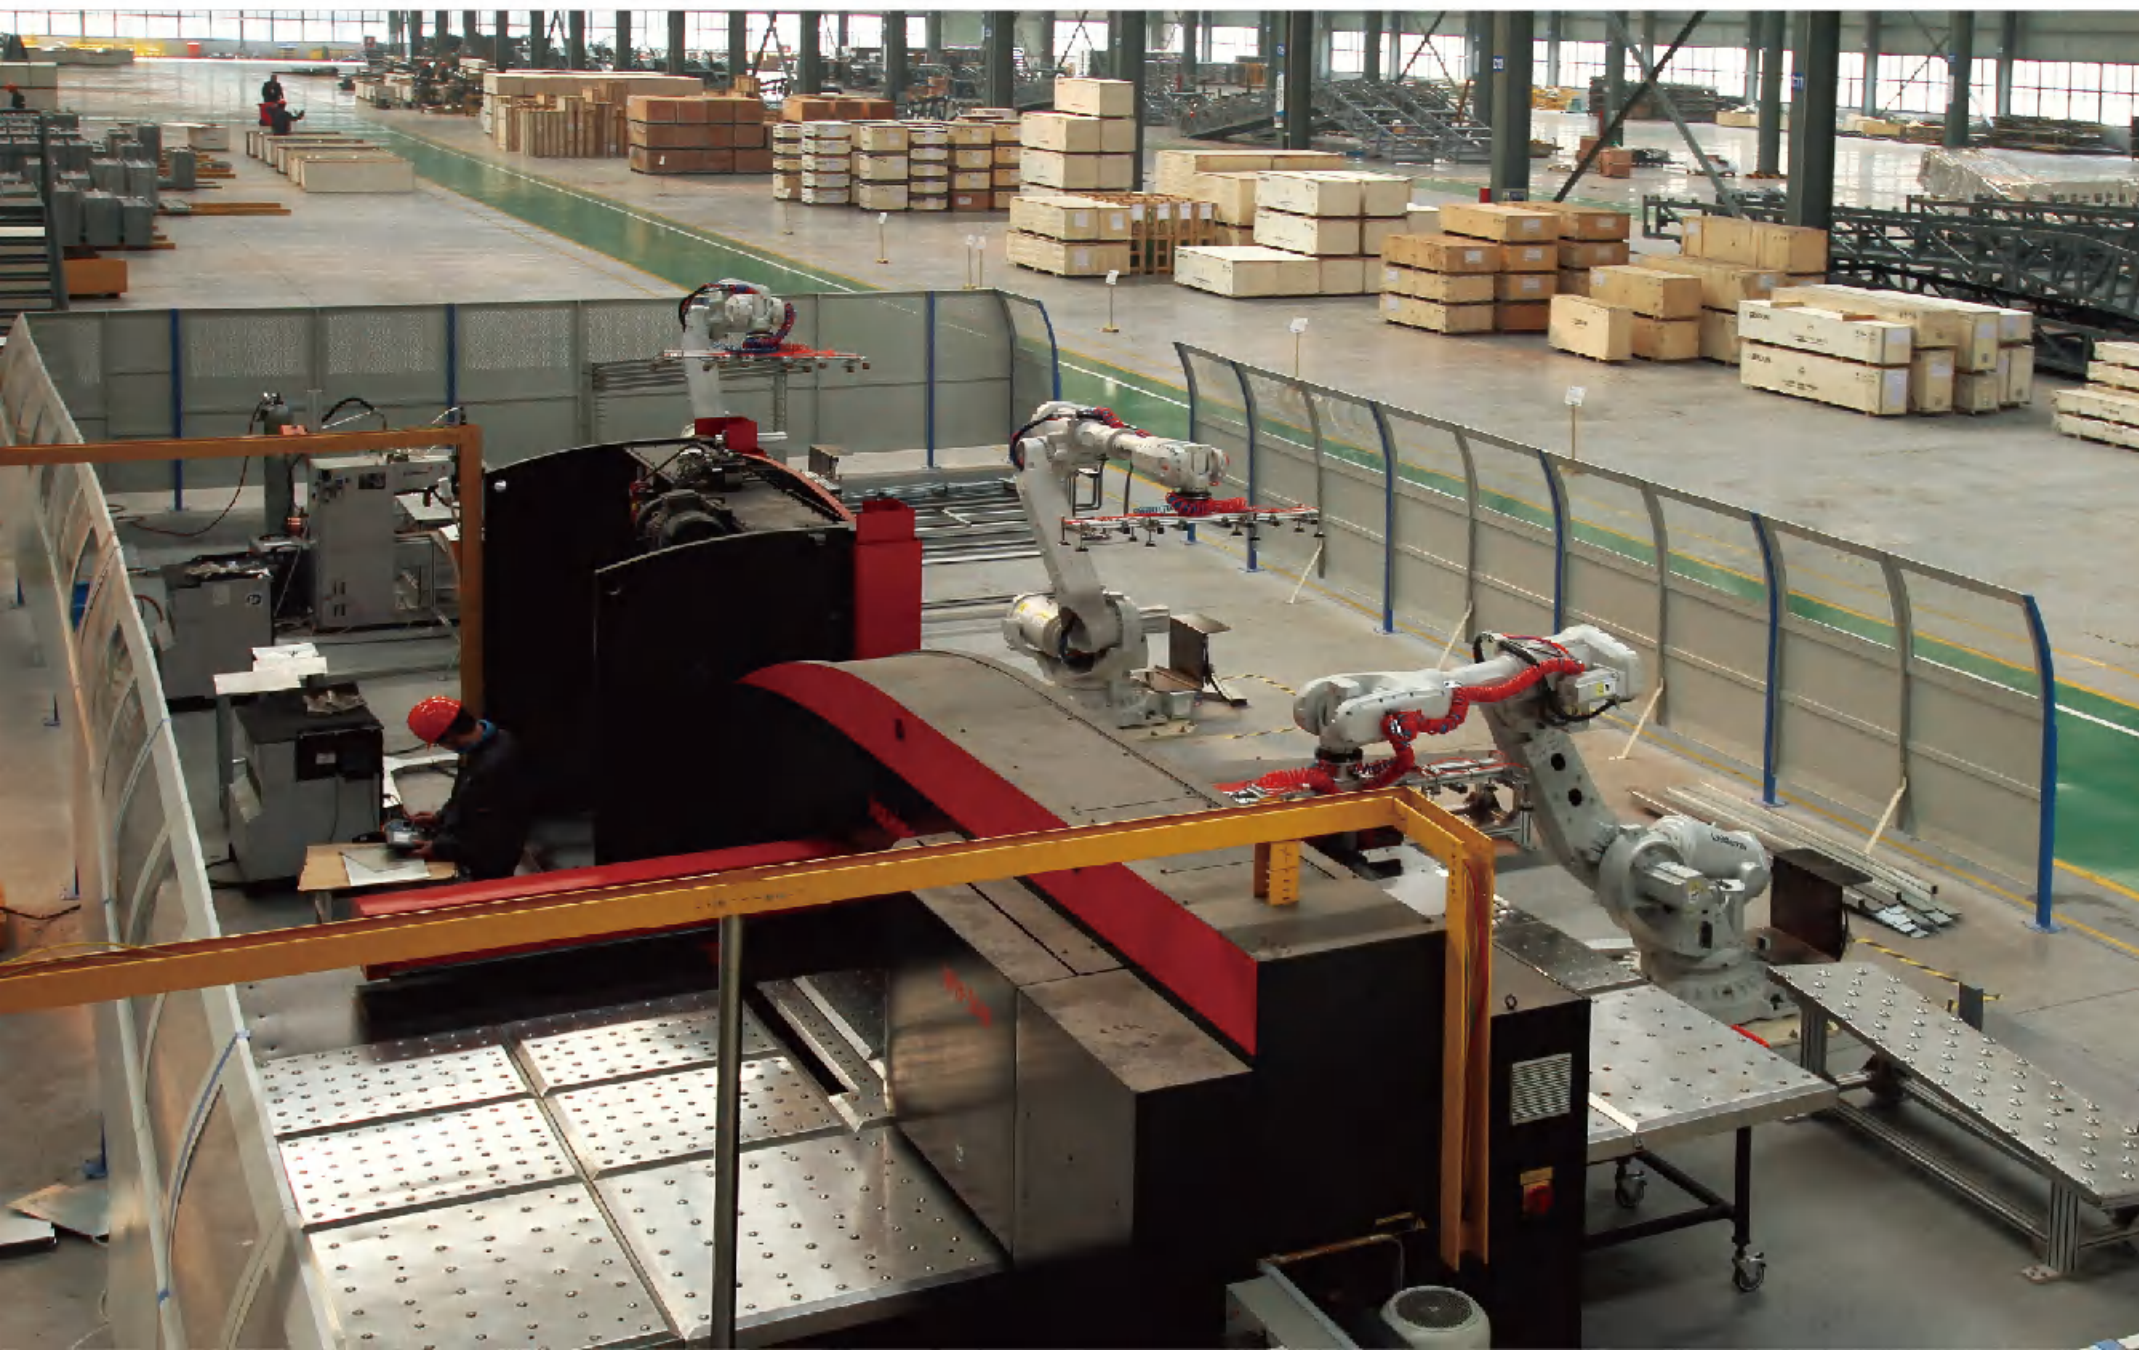

Intelligent technology will be fully popularized, combined with AI, to make elevator rides safer, more efficient, and comfortable.

To be continued

RELEASE THE POWER OF INTELLIGENT MANUFACTURING

MAGLIVE Elevator has a large manufacturing plant, and been equipped with various types of world-class modern production and manufacturing equipment, including laser cutting machine, digital multi-function punching machine, shearing machine, etc, thus to achieve the technicalization and precision machining, the professionals uphold the strict attitude, and adhere to the pursuit of excellence to work on every elevator components carefully.

G-Cloud Services

IMPERATIVE CLOUD SUPERVISION

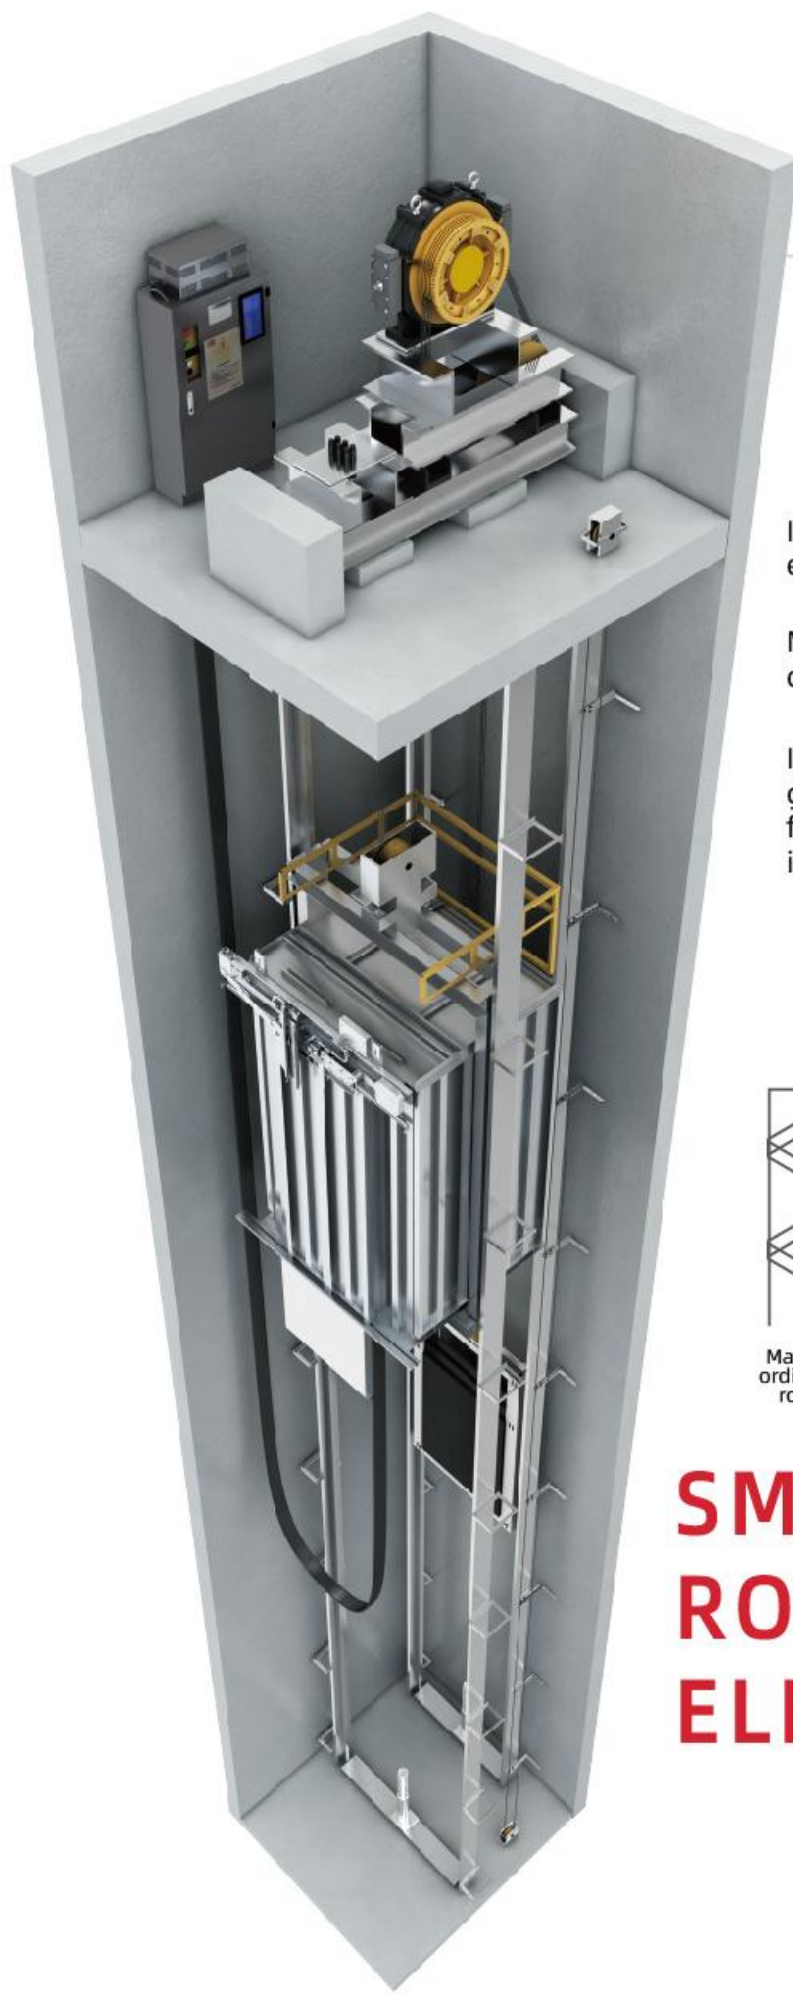

- Connect to the government platforms to meet the mandatory acceptance requirements
- Vibration data uploaded to the cloud to help predict faults throughout the life cycle
- Real-time transmission of elevator control data to grasp the elevator status
- The LAN solution satisfies local real-time monitoring

EFFICIENT AND ACCURATE CLOUD SERVICES

- Predictive maintenance with big data acquisition and analysis
- Door operator data uploaded to the cloud to address the chimney effect
- Remote shared commissioning to improve efficiency
- Encryption authentication and scientific control of accessories

EASY AND WORRY-FREE CLOUD PROTECTION

- **Automatic tracking of emergency handling process**
In case of elevator fault, the G-Cloud platform will automatically create an emergency work order and send the alarm information to the maintenance personnel. The emergency handling process platform can automatically track the elevator status changes and automatically end the emergency handling process after the elevator fault is eliminated.
- **Audio and video interactive services for emergency rescue**
The ESDT terminal supports video and IP calls. Rescue workers can view the trapped persons in the car through the web or APP side, and can establish a call with trapped persons, so as to comfort trapped persons and formulate safe rescue strategies.
- **AI-assisted monitoring of safe passenger journey**
The ESDT terminal that supports video can also be mounted with AI cameras to realize the status monitoring and alarm of the electromobile entering the elevator, the number of passengers, manned and unmanned elevator, and long-term door stop, to further ensure safe passenger journey.
- **Linked mobile device to achieve a smart and convenient journey**
MAGLIVE G-Cloud platform can open the elevator interaction interface for smart mobile devices such as smart phones, service robots and logistics robots to achieve an intelligent and convenient escalator journey.

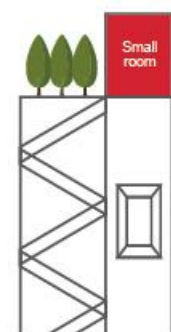

It saves the building area and enhances the design freedom

Machine room is only extension of shaft. It needs no other space

It applies the advanced energy-saving technology. It can fulfill about 30% of energy-saving effects

Machine room in ordinary machine room elevator

Machine room in small machine room elevator

SMALL MACHINE ROOM PASSENGER ELEVATOR

MACHINE ROOMLESS PASSENGER ELEVATOR

Space-saving

Highly energy-saving

Mute running

Optimized well design effectively saves 10% the building area

Green drive and energy-saving device save about 30% of energy

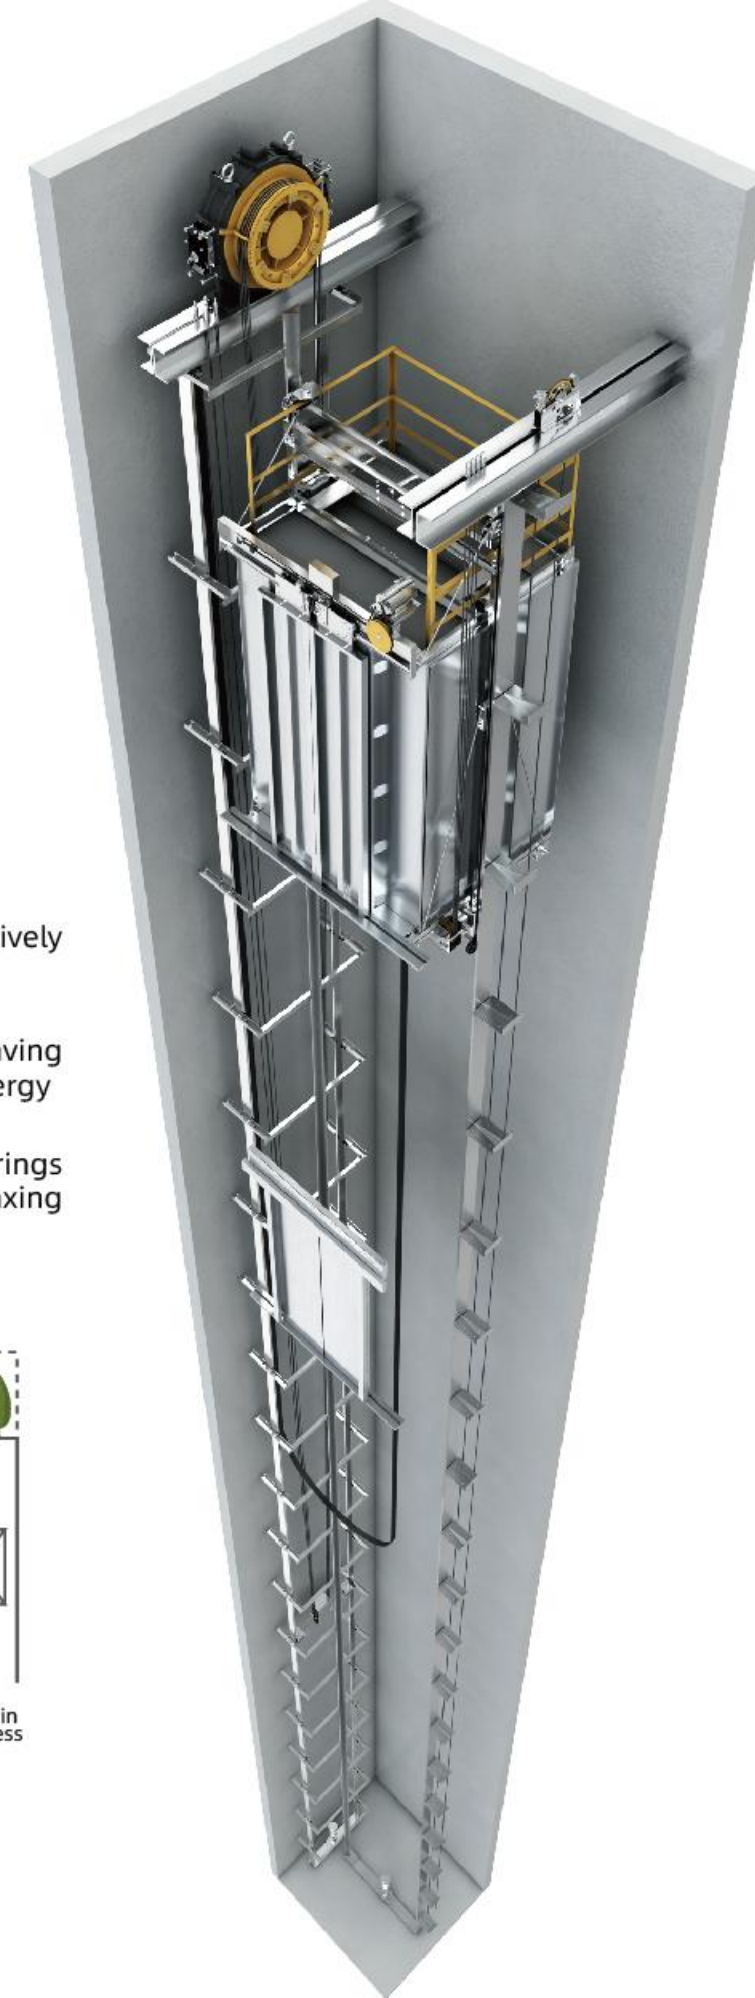

Machine room-less design brings about a freer and more relaxing building designers.

Machine room in ordinary machine room elevator

Machine room in machine roomless elevator

PANORAMIC ELEVATOR SERIES

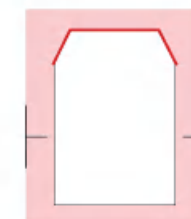

Different model designs

Various types of cars are available for your choice and can meet different needs.

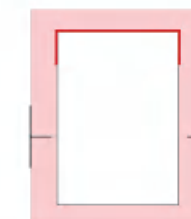

MAGLIVE panoramic elevator applies highly secure laminated glass cabin wall material. It prevents from energy loss with effective sound-isolation. It adopts large-area cabin wall glass to create the best sight-seeing vision. It is smooth in outline design. It adds extra beauty and charm for the building in the travel process.

HOSPITAL ELEVATOR

You feel very much this wonderful human-centered world through our sweet caring

MAGLIVE hospital elevator not only delivers passengers. Because of its special use, it has special and strict requirements to use and functional properties of elevators. MAGLIVE hospital elevator accurately controls elevator running speed. It is smooth and comfortable in operation. It creates a peaceful and graceful space for broad passengers.

Large depth space design

Large door opening width space design

STRETCHER ELEVATOR

Human-centered Design, Rich Functions

It satisfies the needs of emergency patient delivery. It applies human-centered design. It is equipped with a full set of top grade equipment. It travels smoothly and comfortably with broad and bright car. It has ordinary passenger carrying functions. Furthermore, it can hold stretcher. Meanwhile, it offers great convenience for people to carry large furniture.

THE FIRM AND DURABLE CABIN

High strength plate ensures the firm and durable cabin. In addition, MAGLIVE freight elevator specially designs crash barrier to implement multi-protection to the cabin.

HIGHLY ACCURATE LEVELING

Leveling accuracy can be controlled within millimeter-sized range.

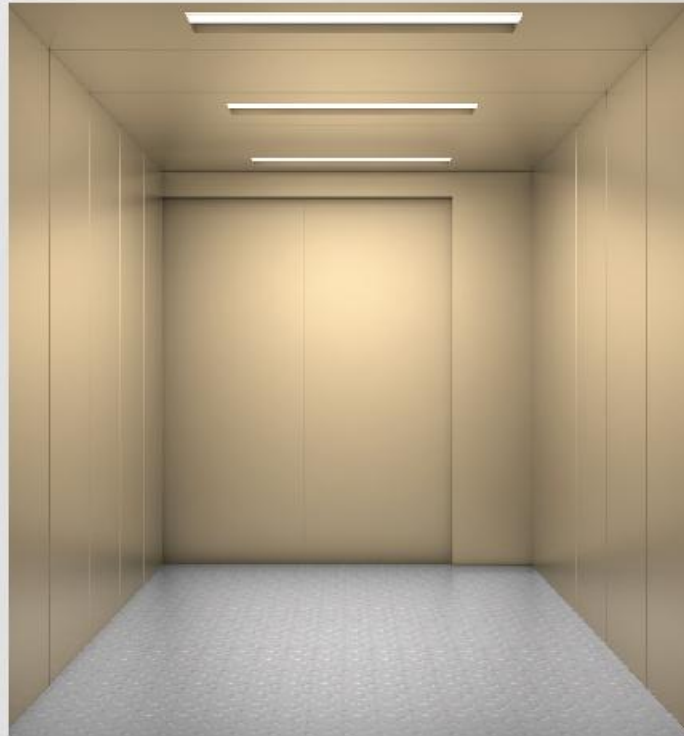

ENERGY-SAVING

Frequency conversion freight elevator applies VVVF and speed regulative technology. It thus greatly reduces the elevators running power consumption and power supply capacity. Compared with the traditional AC-2 speed type elevator, it can save 30%-50% energy.

LARGE DOOR WIDTH

Adopt multi-panel cabin doors to reach the maximum door opening width, making it easy for handling large goods.

HOME LIFT

THE PERFECT AND COMFORTABLE LIFE

Safe home lift provides you with comfortable enjoyment. Multiple comfortable experiences are small in noise and convenient in installation. It fulfills a magical and wonderful household environment for you. Also the elderly, sick, disabled home the best on the lower transport.

OPENING MODE

A variety of ways to open the door for you to choose to meet your different needs.

Side-opening door

Manually operated door

Center-opening door

STEEL BELT TRACTION VILLA ELEVATOR

ADVANTAGES OF SPECIAL - PURPOSE HOME - USE STEEL BELT TRACTION MACHINE

- Lightweight, with low requirements for the hoistway.
- Small in size, occupying less space.
- Built - in brake, resulting in lower noise.
- Low requirements for the top floor height.

SPECIAL - PURPOSE STEEL BELT

- With a polyurethane material layer, it requires no lubrication and generates low noise.
- Its service life is 2 to 3 times that of traditional steel wire ropes.
- It is more flexible, increasing the contact area with the driving wheel.
- More energy - efficient and highly effective.

Steel belt type villa elevator

ALUMINUM ALLOY WELL FRAME

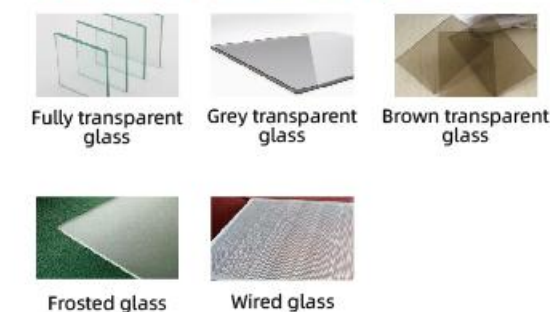

Independent frame glass design does not add any extra building cost with fine light - transparency. It integrates with indoor decoration into one with optional installation position, anti - corrosion and long life cycle. It chooses industrial - class aluminum alloy. Glass applies safety laminated glass.

HIGH GRADE PAINTED ALUMINUM ALLOY FRAME

GLASS CLADDING

ELEVATOR DECORATION

HE-V033

吊顶: 烤漆钢板, LED 筒灯,
暗藏灯带
轿壁: 香槟金不锈钢, 大理石岩板,
暗藏灯带, 仿木纹装饰板
扶手: 金属扶手
地板: PVC (大理石可选)
Ceiling: Paint steel plate,
LED downlight,
hidden lamp belt
Car wall: Champagne gold
stainless steel, marble slate,
hidden lamp belt, wood like
decorative board
Handrail: Metal handrail
Floor: PVC (optional marble)

DUMBWAITER ELEVATOR SERIES

SLIDE-WAY WITH NOVEL DESIGN

Double section-material special-purpose slide-ways are of unique design. It connects with running through door slider. It strengthens the smooth elevator door opening. It also reduces door-plank gap. It is convenient for adjustment.

THE SAFETY AND STABILITY OF SILENCE

Window type
(up / down straight-opening)

Dumbwaiter elevator provides small freight elevators in various buildings with the prompt, economical and convenient vertical transport. It greatly saves time and labor resources. It is widely applicable for delivering food and drinks, dining ware, daily commodities etc. in the hotel, restaurant, bank, hospital and so on.

TRICH SPECIFICATIONS AND MODELS

Ground type
(up / down straight-opening)

Load range: 100kg-300kg. Door modes can be divided into window sill type which is convenient for direct entry/exit of the goods and floor type which is easy for goods cart.

ESCALATOR

Applies the advanced technology, design concept for manufacture in the world. It features as smooth running, low noise, durable, convenient repair etc. It grants you to appreciate the outstanding charm and deluxe manner of modern buildings by fine and exquisite structure, consummate elevator path, delicate belt, deluxe and attractive outline. It provides the passengers with a bright, comfortable, brand-new feeling.

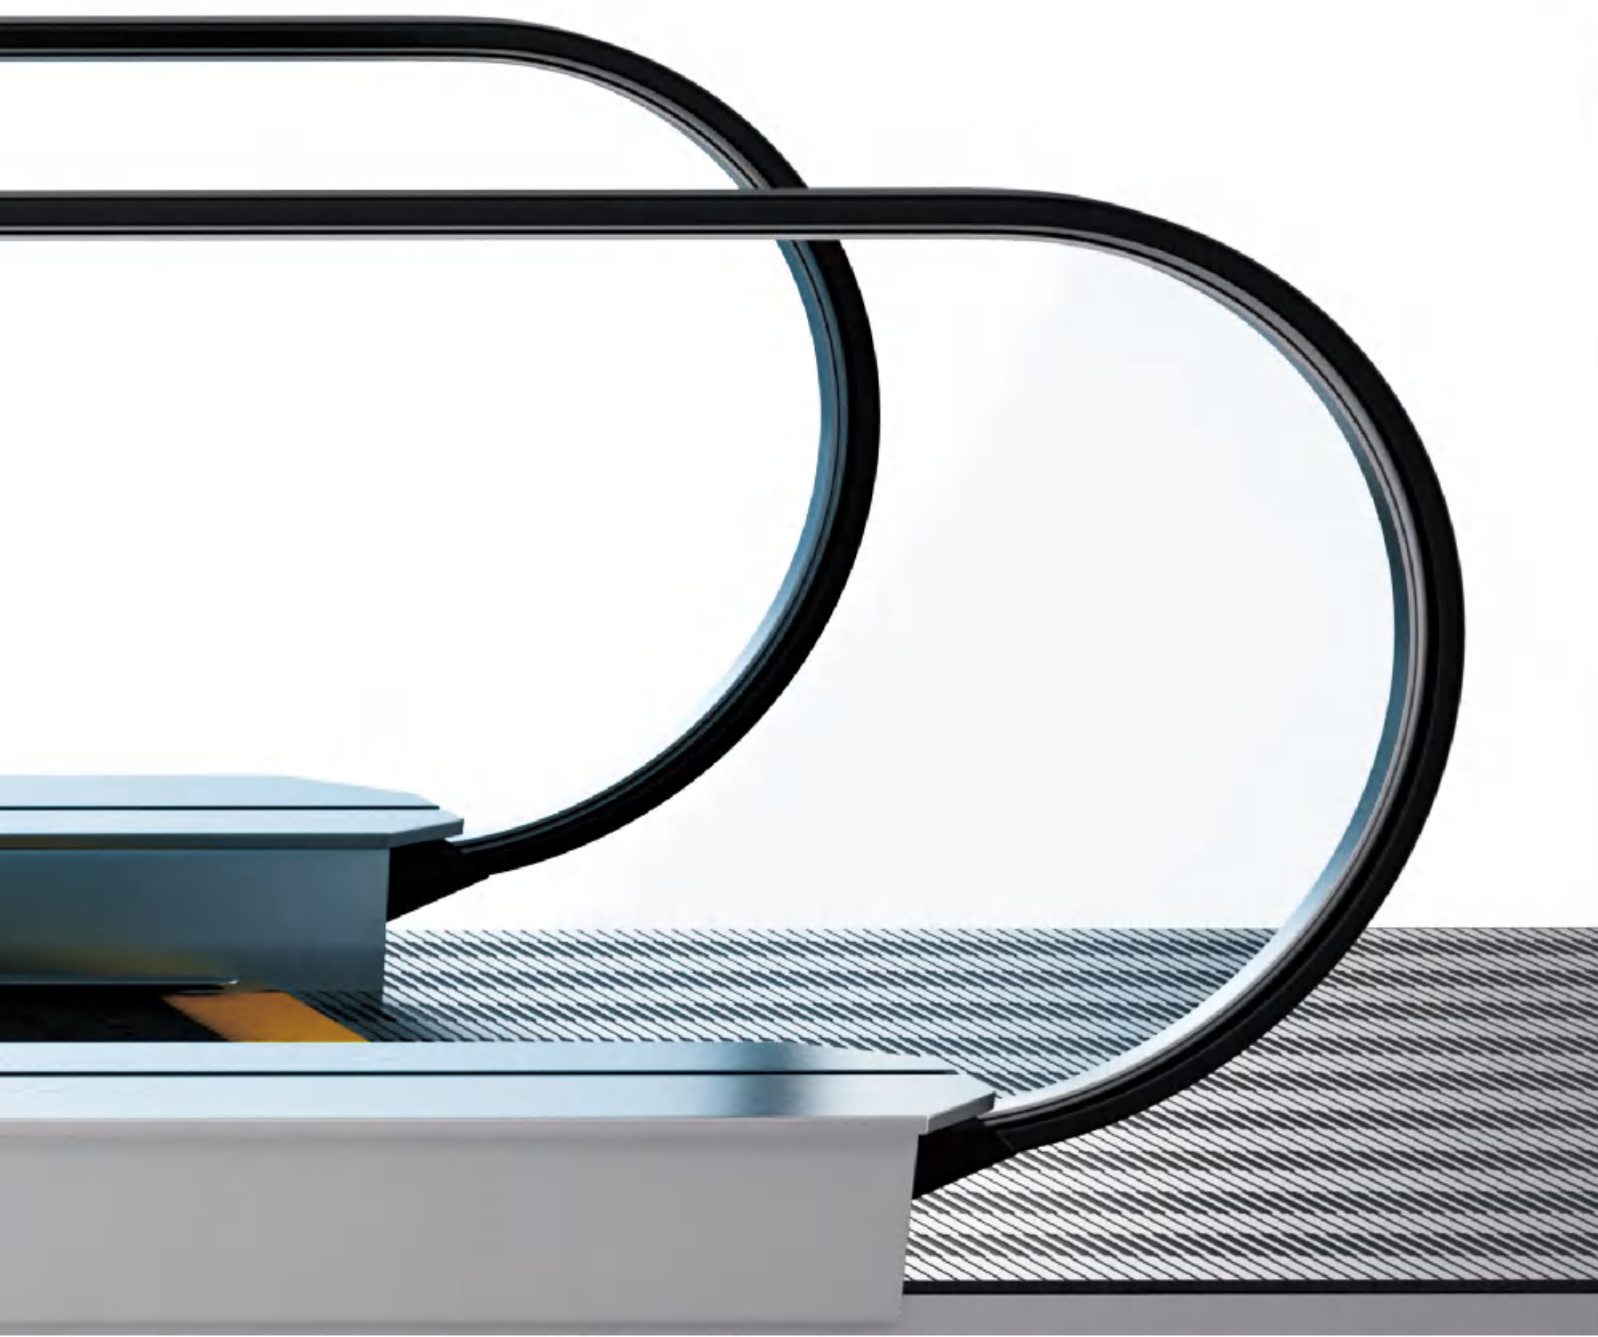

SMOOTH DELIVERY

It applies the advanced international technology and combines with top-class design concept. It produces durable MAGLIVE escalators with smooth operation and low noise. It brings about the brand-new travel experience by fine and exquisite structure, consummate stairway, delicate belt, attractive and charming outline.

MOVING WALK

MAGLIVE moving walk satisfies the transport problem of huge passenger flow. It meets the requirements of long-distance walk, delivery of baby's cart; shopping cart; vehicle for disabled etc. People especially feel as easily as walking on firm earth during up / down shopping travel. It is greatly convenient for people's outing and shopping. It becomes the first-choice solution plan in various large-size supermarkets, airport, exhibition center, transport change-over station.

COMPACT STRUCTURE

Fish-belly beam style short tread greatly reduces space span. It saves the precious building space for broad customers.

ENERGY-SAVING RUNNING MODE

It can apply variable frequency control or self-starting mode to fulfill energy-saving.

SAFETY DESIGN

Emergency stop button

Once this button is pressed, down the passenger conveyor comes into an emergency stop.

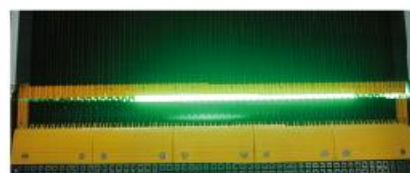

Skirt panel brush

Brush is installed between step and skirting so that the passengers' shoes do not touch the skirt panel.

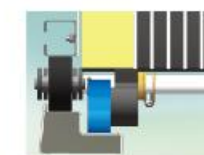

Demarcation lamp(Optional)

Soft and green fluorescent light sends out from the engaging teeth in-between two adjacent steps (treads) in up / down end. It reminds the passengers to pay attention to the step entry / exit horizontal section. It thus enhances the travel safely.

Side guide high accuracy step guiderail system

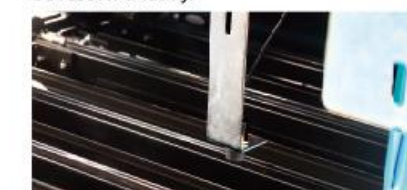

High rigidity big profile guide rail with nose used as transverse step positioning, guarantee the minimum gap between the skirt and step, decrease the possibility of objects clamp in between.

Exterior Decoration

Step loss protection device

The detector is in driving station and steering station respectively. It ensures that the gap out of step (tread) loss does not appear in the entry in up / down motion. Driving station and steering station sets protective detection functions. They shall be verified respectively under normal operation conditions. After the device acts, it can only be reset manually.

Cladding

Speed detection by drive chain-wheel device

When the escalator is reversible or over-speed, the sensor can detect the corresponding input signal. It transmits the signal to main control panel and the escalator host brakes safely.

Automatic lubricator

It is controlled by micro-computer. It gives lubricating signal within the set period. It automatically connects with hydraulic pump for oiling and lubrication.

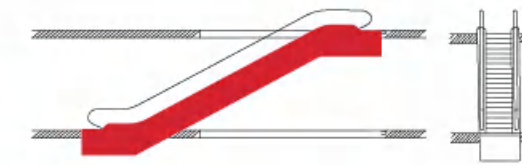

INSTALLATION GUIDE

LOGICAL POSITIONING SYSTEMATIC LAYOUT

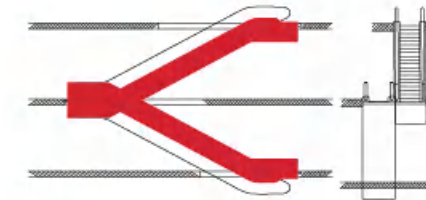

Factors influencing escalator arrangement:
 Building structure
 Installation site and direction of traffic flow
 Traffic volume intensity
 Area of application (commercial sector public transport)
 The customers special requirements

THE FOLLOWING ARRANGEMENTS ARE POSSIBLE:

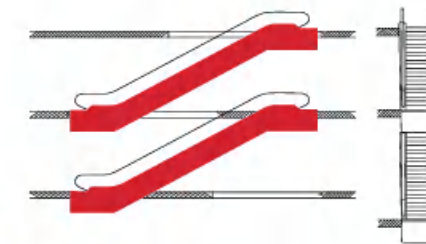

Single unit

The single unit is used to link two levels. It is suitable for buildings with passenger traffic flowing mainly in one direction. Flexible adjustment to traffic flow (e.g., up in the morning and down in the evening) is possible.

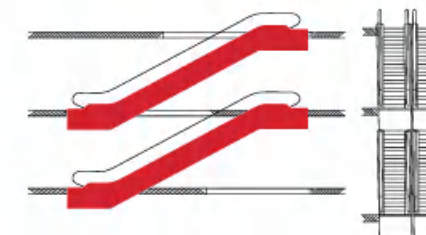

Continuous arrangement
(one-way traffic)

This arrangement is used mainly in smaller department stores to link three sales levels. It requires more space than the interrupted arrangement.

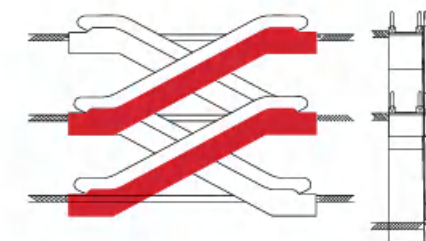

Interrupted arrangement
(one-way traffic)

This arrangement is somewhat inconvenient for users, but advantageous for department store owners, since the short detour to the next unit and the spatial separation between up and down travel is ideal for leading customers past strategically placed advertising displays.

Parallel, interrupted arrangement
(two-way traffic)

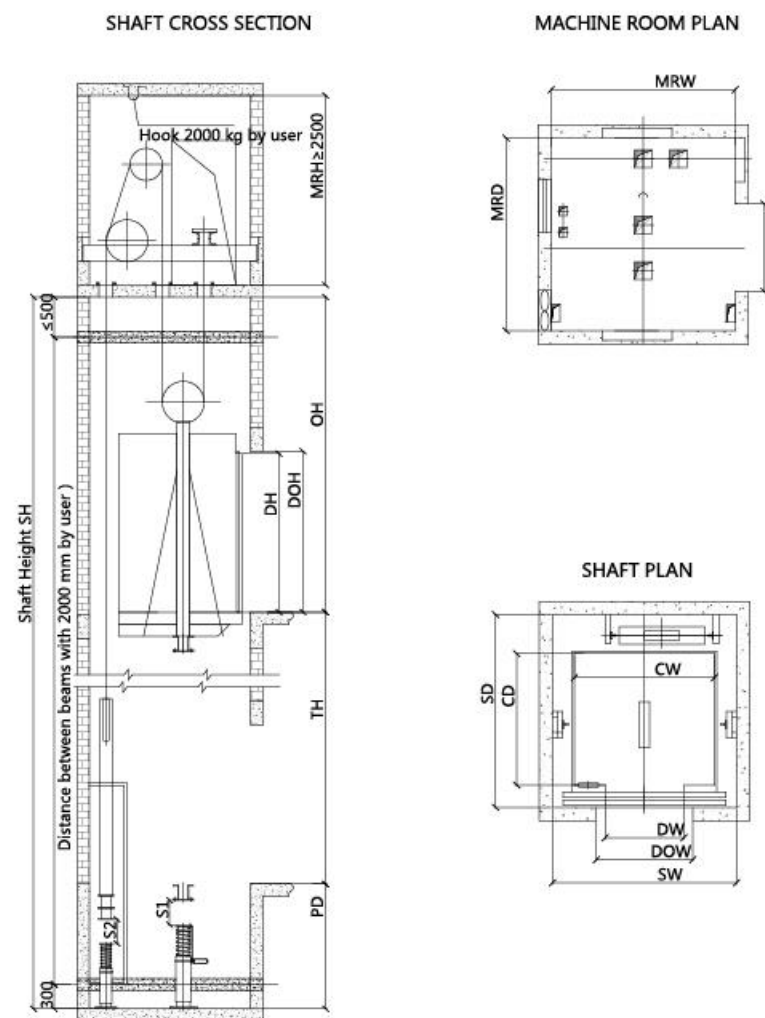

This arrangement is used mainly in department stores and public transport buildings with a heavy traffic volume. When there are three or more escalators, it should be possible to reverse the traveling direction according to the traffic flow, this arrangement is economical, since no inner lateral claddings are required.

Crisscross, continuous arrangement
(two-way traffic)

This arrangement is used mainly in major department stores, public buildings and public transport buildings where transport times between several levels should be kept to a minimum.

The data is for design reference only. For the detailed parameters, please take the technical drawing as the criterion.

THREE SAFETY PARTS

BUFFER

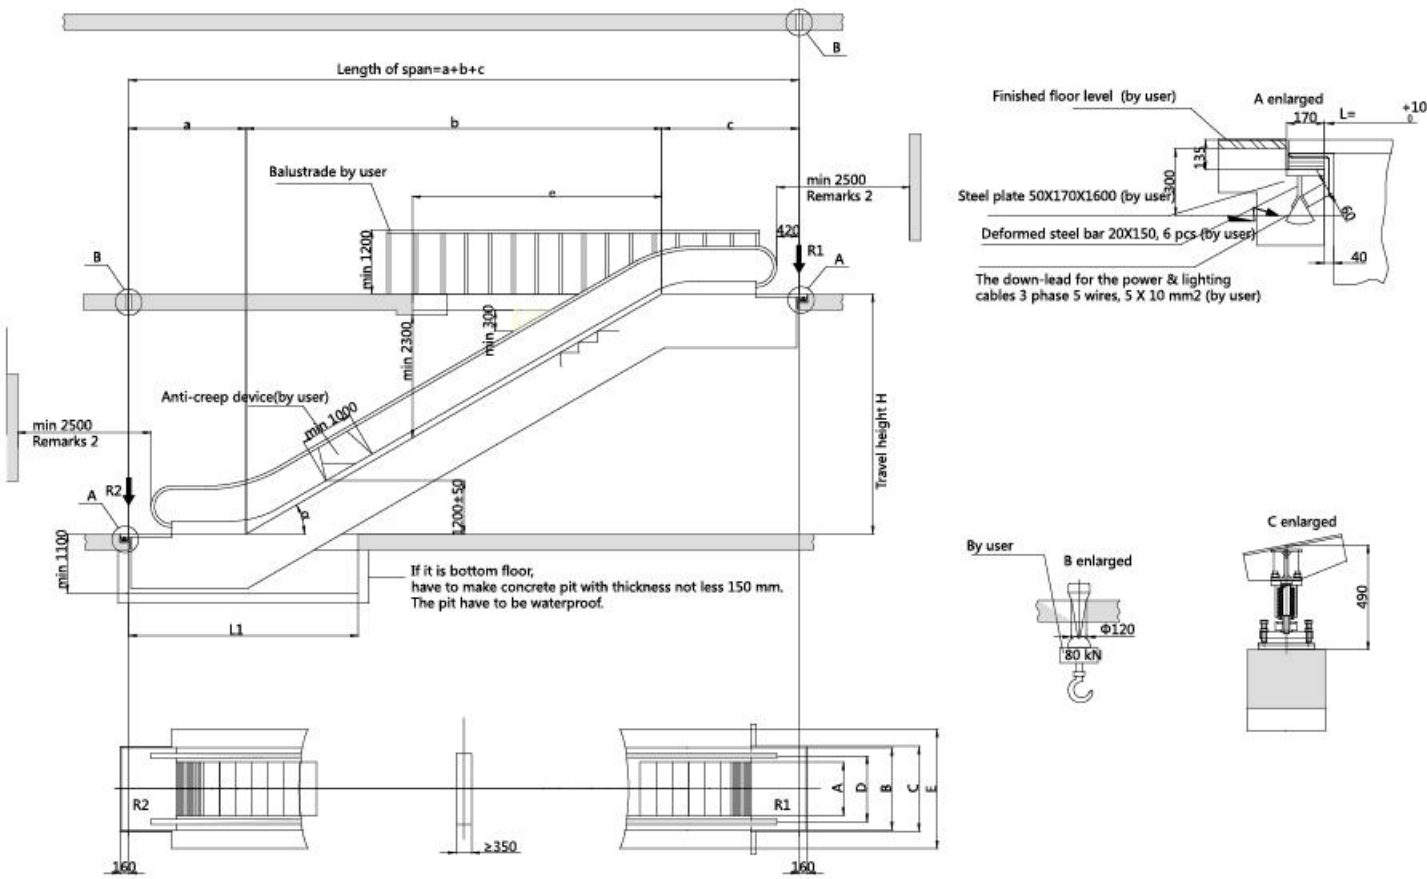

SPEED LIMITER

SAFETY GEAR

If elevator exceeds standard speed limit, speed governor acts and cuts off safety loop to ensure elevator stop. If elevator exceeds standard speed, safety tongs acts through linkage of speed governor. It thus ensures elevator safety brake. It applies hydraulic buffer. It can absorb elevator abnormal impact energy to maximum degree. It thus guarantees safety of vast passengers.

ESCALATOR—SE001
CONSTRUCTION LAYOUT

STANDARD SPECIFICATIONS
AND DIMENSIONS

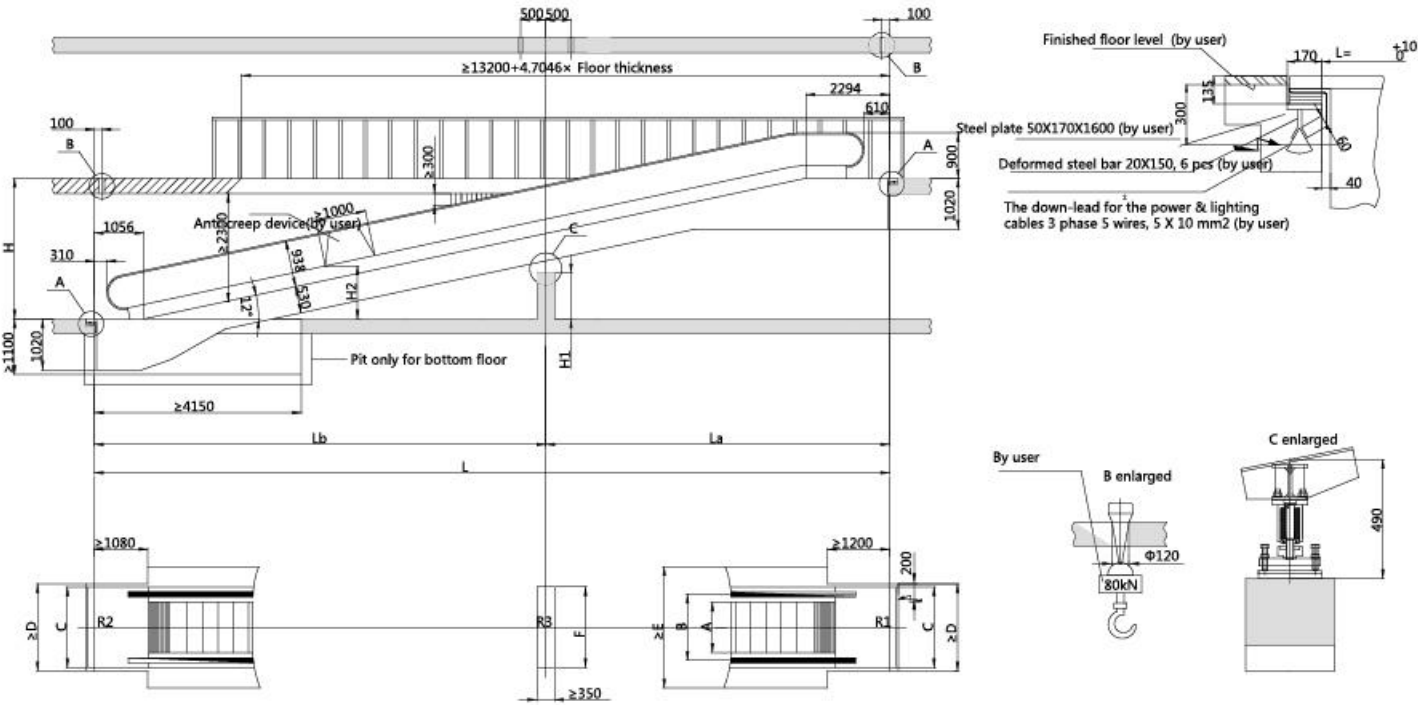

Step width	A	600	800	1000
Exterior width	B	1140	1340	1540
Construction opening	C	1200	1400	1600
Handrail center distance	D	838	1038	1238
Floor slab opening	E	1838	2038	2238
Supporting length	I	1140	1340	1540
Travel height $H \leq 6\text{ m}$ (H 小于等于6 m)	Inclination α	30°		35°
	a	2198		2242
	b	$1.732 \times H$		$1.428 \times H$
	c	2567		2663
	d	4100		4300
	e	$4000 + 1.732 \times S$		$3300 + 1.428 \times S$
Travel height $6\text{ m} < H \leq 9\text{ m}$ ($6\text{ m} < H$ 小于等于9 m)	H1	no N/A		no N/A
	L1	no N/A		no N/A
	Inclination α	30°		
	a	2688

Model	SE001	
Escalator speed	0.5 m/s	
Inclination α	30°	35°
Travel height	H	
Length of span	$HL = a + b + c$	

TECHNICAL DESCRIPTION

- The unit is mm, installed in indoor. The layout drawing is suitable for the construction which the height is under 9 m with speed 0.5 m/s.
- If the step width is 600 mm, 417 mm should be extended at the upper of the truss.
- If the rise is more than 7.8 m, 417 mm should be extended at the upper of the truss.
- Power supply with 3 phase 380V 50 Hz.
- When the $L > 15\text{ m}$, one supporting is required at the center.
- When installed at second floor or above, then no need for pit, the construction of lower entrance is symmetrical to the upper entrance.
- There should be free area at the entrance with width more than 1238 mm and depth more than 2500 from the handrail turning point.
- The distance from the center line for the handrail to the obstacle should be more than 500 mm, if not, the user has to fix a vertical protection plate without sharp edge above the handrail.

MOVING WAYS-SV001
CONSTRUCTION LAYOUT

TECHNICAL
PARAMETERS

Model	SV001	
Speed	0.5 m/s	
Inclination α	12°	
Travel height	H	
Length of span	$L = H \times 4.7046 + 3200$	

TECHNICAL DESCRIPTION

- The unit is mm. The layout drawing is suitable for the construction which the height is under 6 m with speed 0.5 m/s.
- If with double drive, 417 mm should be extended at the upper of the truss.
- Power supply with 3 phase 380 V 50 Hz.
- When installed at second floor or above, then no need for pit, the construction of lower entrance is symmetrical to the upper entrance.
- There should be free area at the entrance with width more than 1238 mm and depth more than 2500 from the handrail turning point.
- The distance from the center line for the handrail to the obstacle should be more than 500 mm, if not, the user has to fix a vertical protection plate without sharp edge above the handrail.

ALL-ROUND SERVICE

INTELLECTUAL WEB OF THINGS SPEEDS UP THE SERVICES FOR YOU

It matches with the advanced Web of Things technology, UNICOM 5G times. It makes real-time collection to the elevator running data. Through non-normal data analysis from micro-processor, it grasps the dynamic information of running condition for each elevator. It is a comprehensive elevator management platform that fulfills positive trouble detection, trouble prompt, quality appraisal, multi-media transmission functions etc. It easily safeguards millions of elevators for you.

SKILLED MAINTENANCE TEAM

They are rich in experience and advanced in craft & tech. They are considerate to the clients' requirements and provide the clients with wholehearted service.

-  **MAKE PLAN**
-  **PROFESSIONAL SERVICES**
-  **TECHNICAL TEAM**
-  **MAINTAIN DATA QUERIES**
